**Lindsay Introduces FieldNET With Pump Control,
Allows Growers to Control Entire Pump and Center Pivot Irrigation System**

(OMAHA, Neb.) – December 2009—Lindsay Corporation, maker of Zimmatic® irrigation systems, announces the addition of pump control to its award-winning FieldNET™ Web-based irrigation management system. With this addition, growers will be able to access a single online portal to monitor and control their entire pump and center pivot irrigation system.

“Lindsay is proud to offer the industry’s first fully-integrated pump and center pivot irrigation monitoring and control package,” says Reece Andrews, GrowSmart Product Manager at Lindsay. “This means for the first time growers have the ability to use a combination of cutting-edge irrigation and pump control technology, all in one package, to save energy, water and labor costs.”

FieldNET, the industry’s first full control Web-based irrigation management system, allows growers to monitor and control their pivots from any Internet connection or cell phone. With a user-friendly Web portal, FieldNET provides growers a quick view of every pivot, providing information on pivot location, pivot status and water usage.

With FieldNET pump control, growers now have information on their entire water delivery system, allowing them to monitor and maintain each pump and pivot for peak performance. This integrated solution automatically tracks and reports pump start-ups and shutdowns and sends alerts for any disparity of normal operations, such as flow alarms.

“By integrating the pump network with the pivot network, we created a pump and center pivot irrigation system that is self-regulating. A unique solution called Dynamic Demand Control (DDC) automatically lowers the pump’s pressure requirement when higher pressures are not needed so the system is always running at maximum efficiency. This significantly reduces the grower’s water, energy and labor costs while providing the convenience of controlling or monitoring the pump and pivot system from anywhere on the globe via the Internet,” Andrews says.

FieldNET with pump control is available in two service levels and can be installed on both new and existing Lindsay systems as well as on systems from other manufacturers.

For more information on FieldNET with pump control, visit www.lindsayfieldnet.com.

Lindsay

Lindsay manufactures and markets Zimmatic®, Greenfield™, Stettyn and Perrot center pivot, lateral move and hose reel irrigation systems, and GrowSmart™ controls, all of which are used by farmers to increase or stabilize crop production while conserving water, energy and labor. The award-winning company also produces large-diameter steel tubing and provides outsourced manufacturing and production services for other companies. Watertronics®, a wholly owned Lindsay subsidiary, is a leader in the manufacturing and servicing of agricultural, sports turf, landscape and golf course irrigation pump systems. Additional information can be found at www.zimmatic.com or www.lindsay.com.
