

COPPERCUFF™

CABLE THEFT DETERRENT

The simple way to eliminate costly repairs and downtime due to copper theft from irrigation systems

- Designed to fit all major brands with 6 5/8" pipe diameters and all cable sizes
- Securely locks pivot cables in place with 11-gauge galvanized steel band
- Easy to install on a full system in less than one hour
- Thieves move from CopperCuff protected systems to unprotected machines saving you costly downtime and potential crop loss

Why the CopperCuff?

Thieves around the world are finding easy targets – each unprotected pivot lets them quickly strip 2-5 miles (3-8 km) of valuable copper. The best way to protect your pivots is with the CopperCuff.

The easy to install CopperCuff is one of the first theft deterrent devices that is proven to protect machine wiring.

How does it work?

The CopperCuff is designed to fit all major brands of pivot and lateral systems and locks the pivot's cables in place, making it difficult for criminals to steal the copper wire. The

CopperCuff encircles the entire pipe along with the cable wiring, creating a lock-tight seal.

Each cuff features a weatherproof reflective decal that deters thieves who search for copper wiring at night by flashlight. With multiple cuffs on each span, thieves cannot quickly remove the cables, so they move on to unprotected systems.

Easy to install at any desired location on the pipeline.

Average repair costs on a theft-damaged machine: approximately \$5,000

(does not include damage to electronics and other pivot components)

Average downtime to repair: Minimum one day

Find out how you can protect your center pivot irrigation systems with the CopperCuff. Visit www.coppercuff.com or talk to your Zimmatic dealer.
